(54) Title: ROTATING ELECTRICAL MACHINE PLANTS

#### (57) Abstract

The present invention relates to installations for transformerless generation of HVDC and wherein the installation comprises rotating high-voltage single-winding/multiple-winding machines and converters. The single-winding/multiple-winding machine comprises a magnetic circuit with one or more magnetic cores and one or more windings, phase-shifted in space, which comprise a cable with one or more current-carrying conductors (2), each conductor comprising a number of strands, around each strand there being arranged an inner semiconducting layer (3), around which is arranged an insulating layer (4) of solid insulation, around which is arranged an outer semiconducting layer (5).

### INTERNATIONAL SEARCH REPORT

International application No.

PCT/SE97/00878

Box I	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This into	ernational search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1.	Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2. X	Claims Nos.: 16-20 because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:  See next sheet!
3.	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
Tais Inte	mational Searching Authority found multiple inventions in this international application, as follows:
See ne	ext sheet!
1. X	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
!	
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark	on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.

### INTERNATIONAL SEARCH REPORT

International application No. PCT/SE 97/00878

#### Box I

Claims 16-20 relate to a "Rotating single winding/multiple winding machine". These claims, however, are directly hierarchically dependent of claim 15, which relates to an "Installation comprising a converter and a rotating machine". This makes the scope of protection sought unclear and therefore no meaningful search can be carried out regarding these claims (PCT, Article 17(2)(a)(ii)).

### Box II

The claims represent nine different inventive concepts:

- I: The invention is defined in claims 1-15 and relates to installations comprising electrical motors and converters capable of transforming mechanical torque into direct current and vice versa without utilising intermediate transformers.
- II: The invention is defined in claims 21-31 and relates to electrical machines with windings, comprising conductors surrounded by two semiconducting layers having an interposed insulating layer.
- III The invention is defined in claim 32 and relates to an electrical machine with a core comprising salient poles and further comprising windings, phase-shifted in space.
- IV: The invention is defined in claim 33 and relates to an electrical machine with an air-gap winding.
- V: The invention is defined in claim 34 and relates to an electrical machine with radial airgap flux.
- VI: The invention is defined in claim 35 and relates to an electrical machine with axial airgap flux.
- VII. The invention is defined in claim 36 and relates to a method for manufacturing an electrical machine comprising a flexible winding.
- VIII: The invention is defined in claim 37 and relates to a method for manufacturing an electrical machine comprising windings in the form of a cable, which is threaded into the stator of the machine.
- IX: The invention is defined in claim 38 and relates to a method for manufacturing an electrical machine comprising windings in the form of a cable. The machine includes salient poles around which the cable is wound.

The requirement of unity of invention is fulfilled only when there is a technical relationship among the inventions involving one or more of the same or corresponding special technical features. The special technical features shall also define a contribution which the claimed inventions, considered as a whole, makes over the prior art (PCT, Rule 13).

The claimed inventions do not fulfil this requirement and therefore unity of invention is lacking.
